

Task 5 - Data-to-Report - Full Chain

Turn 5 - Executive Report Prompt

Context: The previous four turns cleaned and analyzed the weekly sales dataset. Role: Act as a senior sales analyst writing for management. Task: Create the final executive report using only the verified insights from Turn 4. Format: Start with the key finding, then Performance, Risks, and Recommended Actions. Maximum 300 words. Constraints: Use accurate figures only, keep a formal professional tone, do not invent causes or missing facts, and clearly mention that qty 99 is an unverified outlier.

Sample executive report

Key finding: Total cleaned revenue is 15,169.57, with South leading at 7,679.85. Widget A is the highest-revenue product at 6,390.00. West and North follow South, while East records only 670.00. The main analytical risk is order 1019, which has qty 99 and revenue 4,455.00; this order strongly affects March 15 and should be verified before forecasting. Data quality issues also included missing values, inconsistent casing/date formats and one N/A revenue value. Recommended actions are to verify order 1019, review the weak East region and pending orders, and add a validation step before future weekly analysis.

Turn	Purpose	Input	Expected Output
1	Quality check	Raw sales CSV	Structure + data issues
2	Clean	Turn 1 issues + raw data	Cleaned/flagged dataset
3	Analyze	Cleaned data	Totals, rankings and trends
4	Extract insights	Analysis results	5 verified actionable insights
5	Report	Insights from Turn 4	Formal executive report, max 300 words

Quality Criterion	Met?	Comment
Leads with key finding	✓	Starts with total revenue and top region.
All figures accurate	✓	Figures match the provided dataset after defined cleaning.
Within word limit	✓	Under 300 words.
Formal professional tone	✓	Short management style.
Actionable recommendations	✓	Three clear actions.
No invented data	✓	No unsupported causes added.
