

Task 1 - Design an AI Workflow from Scratch

Chosen recurring task

Turn raw notes after a client call into a clear summary.

INPUT

Raw bullet-point notes from the client call. The notes can be plain text.

PROCESS

Use ChatGPT with one structured CRTFC prompt. The AI organizes the notes, finds decisions and actions, and creates a clean summary.

OUTPUT

A short client-call summary with: Client, Main Topics, Decisions, Action Items, Owner, and Deadline. It can be copied to the CRM and shared with my manager.

REVIEW

I review names, dates, decisions and action owners before using it. Review should take about 3-5 minutes.

Context

I receive raw notes after client calls and normally spend 20-30 minutes organizing them.

Role

Act as a professional project assistant.

Task

Convert my raw client-call notes into a clear structured summary.

Format

Use headings: Summary, Key Decisions, Action Items, Owners, Deadlines, and Follow-up.

Constraints

Use simple professional English. Do not invent missing information. Write 'Not provided' if something is missing.

Combined Prompt

I receive raw notes after client calls and normally spend 20-30 minutes organizing them. Act as a professional project assistant. Convert the notes into a clear summary with sections for Summary, Key Decisions, Action Items, Owners, Deadlines and Follow-up. Use simple professional English. Do not invent information; write 'Not provided' when a detail is missing.

Output rating

5 - Excellent

Improvement

I would add a fixed company template and examples of previous good summaries.
