

Task 5 — Advanced Prompting Techniques

Technique A — Prompt

Explain step by step how a JWT token is validated on an API server. Then identify 3 possible security vulnerabilities. Keep the explanation simple.

Technique A — Response summary

The server receives the token, checks its signature, checks expiration time and reads user information. Problems include weak secret keys, bad expiration checks and incorrect token validation.

Technique B — Few-Shot Prompt

Example 1: // Check if user exists. Example 2: // Save the new order. Use the same short comment style for my new function.

Technique B — Observation

Giving examples helped AI understand the comment style I wanted.

Technique C — Prompt 1

Write a simple Java method to create a user.

Technique C — Prompt 2

Now add error handling.

Technique C — Prompt 3

Now add logging and a simple unit test.

Technique C — Observation

The result became better when I improved the prompt step by step.
