

Task 10 - Capstone - Presentation & Peer Feedback

Slide 1 - The Problem

Weekly sales reporting takes about 45-60 minutes because I manually check data, calculate results, identify problems and write the report.

Slide 2 - The Workflow

Every Sunday n8n reads the weekly sales sheet, checks that data exists, sends it to the AI step, creates the report, archives it and prepares an email.

Slide 3 - The Prompt

CRTFC template uses [WEEK_DATE], [SOURCE], [SALES_DATA] and [WORD_LIMIT]. AI acts as a sales analyst and returns headline, metrics, performers, risks and recommendations without inventing facts.

Slide 4 - Live Demo / Output

The sample report found total revenue of 15,169.57, South as the top region, Widget A as the top product and flagged order 1019 as an outlier.

Slide 5 - Impact

The workflow can save around 40-50 minutes each week while keeping a five-minute human review for accuracy and privacy.

Peer Feedback - Example

Presenter name: Peer Participant. Workflow: Automated meeting follow-up. Problem clearly defined: 5/5 - clear recurring manual task. Workflow logic: 5/5 - trigger and output connect well. Prompt practical/reusable: 4/5 - add stronger missing-data constraints. Output demonstrated: 5/5 - example was easy to understand. Time saved credible: 4/5 - compare with two real runs. One thing I would improve: add an approval step before sending. One thing I will use in my work: clear placeholders for reusable prompts.
