

Task 7 — Technical Documentation Generation

Doc Type 1 — Docstring Prompt

Add a Google-style docstring to this Python function. Explain the parameters, return value and possible errors. Do not change the code.

Docstring Result

The docstring explains `user_id`, `items`, `discount_code`, the returned order summary, and the possible `ValueError` when the total is negative.

Doc Type 2 — README Prompt

Write an Installation & Setup section for a Node.js REST API README. Include prerequisites, cloning, dependencies, `.env` configuration and running the development server.

README Result

Install Node.js, clone the repository, run `npm install`, create/configure `.env`, then run the development server.

Doc Type 3 — Commit Message Prompt

Write a conventional commit message for adding Redis caching to `/products` and fixing a null pointer bug when product category is undefined. Keep it short.

Commit Message Result

feat: add Redis caching and fix undefined product category

Which required least editing?

Commit Message

Why?

Because the output was short, clear and ready to use.
