

Task 9 - Multi-Document Analysis

Multi-Document Analysis Prompt

Analyze Document 1 (Q3 Customer Feedback) and Document 2 (Q3 Engineering Performance). Produce: 1) a short Executive Summary, 2) a Key Themes table, and 3) Top 3 Insights. Cite every insight as [Document 1], [Document 2], or [Documents 1 & 2]. Do not add facts not found in the documents.

Executive Summary

Customer satisfaction is 3.6/5 with strong onboarding and support, but performance problems are affecting the experience. Slow report generation is the largest customer complaint, while engineering reports that the report module is under-resourced with three open bugs. Mobile crashes also match engineering's high-risk mobile codebase. Engineering delivered important payment and security achievements, but velocity remains below target.

Top 3 Insights

- 1. Report performance is a shared customer and engineering problem: 41 customers mentioned slow report generation, while the module has one engineer and three open bugs. [Documents 1 & 2]
- 2. Mobile reliability needs attention: 27 customers reported crashes and engineering classifies the mobile codebase as high risk. [Documents 1 & 2]
- 3. QA process improvement is working: QA integration reduced late-stage bug discovery by 30%. [Document 2]

Evaluation

Executive Summary: Yes. Key Themes table: Yes. Sources cited: Yes. Conflicts flagged: N/A - no direct conflict found. Requested format followed: Yes.

Prompt improvement

Require every numeric claim and every insight to include a source label immediately after the sentence.

Theme	Document 1	Document 2
Report performance	41 mentions of slow reports; dashboard takes 8-10 seconds	Module under-resourced; 1 engineer; 3 open bugs
Mobile quality	27 mentions of mobile crashes	Mobile codebase flagged high risk
Customer strengths	Fast onboarding; responsive support; clean interface	No direct matching measure
Delivery & quality	No engineering delivery data	42 velocity vs 50 target; payment early; 0 critical security findings
