

Task 9 - Capstone - Design & Build Your Workflow

Workflow Name

AI Weekly Sales Report Assistant

Problem Statement

Weekly sales reporting is repetitive. I have to check the data, calculate results, find issues and write a manager-friendly report manually.

Current State

I copy data from a spreadsheet, check it, calculate totals and write the report manually. It can take around 45-60 minutes each week.

Trigger

A scheduled weekly run every Sunday after the sales sheet is updated.

Input Data

Weekly sales rows from a spreadsheet/CSV: date, region, product, qty, unit price, revenue, rep and status.

AI Prompt Template

Context: You receive weekly sales data for [WEEK_DATE] from [SOURCE]. Role: Act as a careful sales analyst. Task: Review [SALES_DATA], summarize performance, identify missing/invalid values and outliers, and prepare a management report. Format: HEADLINE; KEY METRICS; TOP PERFORMERS; ISSUES/RISKS; 3 RECOMMENDATIONS. Maximum [WORD_LIMIT] words. Constraints: Do not invent causes or targets; flag uncertain data; mention any outlier that may distort results.

Output

Maximum 220-word report for the sales/operations manager, saved to the report archive and prepared as an email.

Automation Tool

n8n.

Review Step

I review the report for 5 minutes before sending. I check totals, dates, missing values, outliers and recommendations.

Time Saved

About 40-50 minutes per week, or roughly 3 hours per month.

Responsible AI Check

Do not send customer PII or secrets to the model. Use only necessary business fields. Human review is required for accuracy, especially unusual orders and recommendations.

Live Build - Sample Output

Headline: South leads weekly revenue, but one unusually large order must be verified. Key metrics: total cleaned revenue 15,169.57; South 7,679.85; top product Widget A 6,390.00. Risk: order 1019 has qty 99 and revenue 4,455.00, which strongly affects the result. East revenue is only 670.00. Recommendations: verify order 1019, review East and pending orders, and add automatic data validation before future reports.

Quality Self-Check
