

Task 10 - Write an Executive Summary

Context

Senior management needs a short view of Q3 customer feedback and engineering performance.

Role

Act as a senior business analyst writing for executives.

Task

Write an executive summary of the Q3 customer and engineering documents.

Format

Recommendation first, then Evidence, Risks and Next Actions.

Constraints

Maximum 200 words for version 1. Maximum 100 words for version 2. Use no new information.

200-word Prompt

Act as a senior business analyst. Using only the Q3 customer feedback and engineering performance documents, write an executive summary for senior management. Put the recommendation first, then Evidence, Risks and Next Actions. Keep it under 200 words and do not add information.

200-word Version

Recommendation: Prioritize report-generation performance and mobile reliability while maintaining the recent QA process improvement.

Evidence: Customer satisfaction is 3.6/5. Slow report generation was mentioned 41 times, bulk export 38 times, and mobile crashes 27 times. Engineering reports that the report module has one engineer and three open bugs. The mobile codebase is high risk. Payment integration launched two weeks early and the security audit had zero critical findings.

Risks: Sprint velocity is 42 against a target of 50, and unresolved report/mobile issues may continue affecting customer experience.

Next Actions: Focus engineering attention on report performance and mobile stability, while continuing QA involvement in sprint planning.

100-word Version

Recommendation: Prioritize report performance and mobile stability. Customers reported slow report generation 41 times and mobile crashes 27 times. Engineering confirms the report module is under-resourced with one engineer and three open bugs, while the mobile codebase is high risk. Customer satisfaction is 3.6/5. Engineering also delivered payment integration early and completed a security audit with zero critical findings. Continue the QA sprint-planning process, which reduced late-stage bug discovery by 30%, while focusing resources on the main customer pain points.

Comparison

200-word: recommendation first, no extra information, more context and sections. 100-word: recommendation first, no extra information, faster for executives.

Most useful limit

The 100-word version is more useful for a quick executive review because it keeps the most important facts without too much detail.
