

Task 12 — Design Your Personal AI Developer Workflow

The task I chose

Debugging my code.

AI tool I will use

ChatGPT.

The prompt template

I will give AI my code and error, ask it to find the problem, explain it simply, and show the corrected part.

Estimated time saved

Around 2 hours every week.

Impact on my work

It will help me find problems faster and understand my mistakes.

60-Second Pitch

The task I chose is debugging because it sometimes takes me a long time to find the problem. I will use ChatGPT. I will give it my code and the error, then ask it to find the problem, explain it simply and show me the corrected part. I expect this to save around two hours every week and help me understand my mistakes.

Final Reflection — General use case

Writing emails and summarizing information.

Final Reflection — Developer use case

Finding bugs and explaining my code.

One thing I understand now

A good and clear prompt gives me a much better answer.

One question I still have

How can I use AI with a large project without sharing private information?

My commitment

I will use AI to review one of my Java classes and explain any problems it finds.

#	Task	Type	AI Tool	Template	Time
1 ★	Find code errors	Dev	ChatGPT	Code Review	2 hrs
2 ★	Explain Java code	Dev	ChatGPT	Learning	2 hrs
3	Write emails	General	ChatGPT	Email	30 min
4	Write documentation	Dev	ChatGPT	Documentation	1 hr
5 ★	Debug code	Dev	ChatGPT	Debugging	2 hrs
6	Create tests	Dev	ChatGPT	Test Generation	1 hr
7	Summarize meetings	General	ChatGPT	Summary	30 min
8	Refactor code	Dev	ChatGPT	Code Review	1 hr
